SEQTA Notices - Adding an image to a notice

Step-by-step guide

ⓘ These steps only work for files that are on websites and do not work for files saved locally to your computer.

1. Open the SEQTA notices editor
2. In a separate window open the image in a web browser
3. Click and drag the image from the separate window into the notice where you want it to be placed.

ⓘ Adding an image in this fashion may make the notice in SEQTA slower to load as you're loading the whole image into the notice (instead of merely linking it).
